

Security Management Partners Professional Services

SECURITY MANAGEMENT
PARTNERS

Real Information Security from the Independent Experts

How well does your organization defend sensitive information?

Do you conduct ongoing infrastructure assessments and have a strategic security model that mitigates risk?

“**SECURITY MANAGEMENT PARTNERS** brought the application security expertise we needed to complement our own internal efforts. SMP’s automated and manual approach both validated Acushnet’s own efforts while providing suggestions and remediation efforts we hadn’t thought of. We have not only utilized SMP’s application expertise but their external and internal penetration testing, and security infrastructure assessments as well. SMP has exceeded our expectations on every project.”

—**PETER MARSHALL**
Vice President,
Technology Services
Acushnet Company

SMP’s singular focus is IT security audit and assessment professional services. Our vendor neutral, in-depth IT Assurance consulting approach leverages best practice and compliance expertise from hundreds of engagements. SMP will reduce your company’s vulnerabilities, brace operational and network infrastructure security, and facilitate compliance with evolving government regulations. We provide concrete, actionable recommendations to help you achieve, *and maintain* the right level of security.

Our multi-faceted service solutions include:

Network Assessments reveal the existing security posture of an organization. SMP identifies vulnerabilities, assesses threats to information assets and systems, and offers realistic solutions and valuable information to facilitate informed risk decisions.

External Audit—Performed from an outsider’s perspective, usually across the internet. Identifies publicly accessible vulnerabilities and determines what information is available to hackers.

Internal Audit—Conducted from inside the network to determine how much information a disgruntled employee or contractor can acquire without detection.

Wireless Audit—Assesses the security of an authorized wireless network while identifying rogue access points, mapping an area’s wireless activity, and showing signal leakage.

Application Security Assessment—Utilizes in-depth probing to fully test access controls and identify configuration deficiencies and security vulnerabilities.

Security Management Partners

Professional Services

Operational Assessments review existing infrastructure design and operational controls for weaknesses to determine if they are adequate to protect information assets, and if they are being adhered to on a day-to-day basis.

IT Risk & General Control Audit—An IT Risk Assessment evaluates the existing Risk Management process to determine if it is adequate to protect business assets and complies with regulatory requirements. The IT General Control Audit identifies relevant systems and processes, determines the effectiveness of existing controls and practices, and comments on Quality of Risk Management and Aggregate Risk.

Security Policy and Procedure Review—Verifies policies are comprehensive or identifies areas requiring improvement. Reveals gaps between operational controls and those mandated by existing policies.

Architectural and Firewall Review —Examines topology, rule bases and device configuration along with firsthand observations and direct questioning to determine adequacy of existing controls.

Social Engineering Assessment—Uses means such as lies, impersonation, and subversive access attempts to test the strength of existing policies, staff training, and technical controls.

Consulting Services Whether responding to an information security incident, developing compliant policies or assisting in the development of a security strategy, SMP offers a variety of security experience in preventive, detective, and corrective services.

Incident Response—Helps your organization develop incident response plans, provides experts to minimize damages, preserve evidence and investigate root causes of a computer incident.

Digital Forensics—Utilizes investigative protocol derived from stringent law enforcement standards and helps to achieve the proper retrieval of evidence. Performs analysis of data to be used as evidence in a court of law.

Policy Creation—Customizes security policies for your organization that are relevant and compliant with regulatory requirements. Addresses the business objectives of your organization while operating within your cultural boundaries.

Custom Security Consulting—Sold as blocks of hours for specialized consulting engagements. From Blackberry audits, to laptop encryption testing, VPN account testing, Citrix review and testing, customized security training, and other specialized security testing, SMP will customize a large or small engagement to fit our client's needs.

Regulatory Compliance—Assesses the gaps between the existing security posture and regulatory requirements and verifies compliance through repeated testing.
